## **DETAILED ACTION**

## Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 1-6 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The claims are replete with occurrences where there is no antecedent basis, e.g., claim 1, line 3, "the external skin" and line 5, "the airtight part", claim 6 "the pressure dome".

Also, there are occurrences where the claim language is confusing, e.g., claim 1, lines 6-9. Claim 2.

It appears the claims should be completely revised or re-written.

## Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. The factual inquiries set forth in *Graham* **v.** *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

Application/Control Number: 10/591,835 Page 3

Art Unit: 3644

1. Determining the scope and contents of the prior art.

- 2. Ascertaining the differences between the prior art and the claims at issue.
- 3. Resolving the level of ordinary skill in the pertinent art.
- 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.
- 5. Claims 1-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Micale et al. 6003812 in view of Saint-Jalmes et al 7395989.

Referring to the figures of Micale, there is shown a fuselage for an aircraft comprising substantially all the features of the claimed invention, especially: vertical posts and arched supports (fig. 11), transversely extending lower supports (fig. 16) and stringers, framework & skin (fig. 13). Micale's method of building, however, is shown only for conventional fuselages, i.e., cylindrical in shape. However, it is submitted that the method taught by Micale could be used to make any variety of aircraft fuselage, e.g., one that is substantially greater in width than height as is shown in the patent to Saint-James, for the purpose of building a fuselage that maximizes space while maintaining its structural integrity.

## Allowable Subject Matter

It should be noted that the Examiner understands the essence of this invention lies in the unique feature of the "springing line" of each arched elements (10, 11) extending in the longitudinal direction of the fuselage itself, and transversely to the lower supports (5). If this feature is written into independent claim 1, along with the existing features of claim 1, claim 1 would be allowable over present
